- No need for an additional Power Supply
- High or low voltage input option
- Power all devices directly from controller
- Pro Wireless, Network, or USB connectivity
- Separate read In / Out connections
- Integrated battery backup
- Long range wireless built on a mesh
- More cost effective install with less wire
- Faster more efficient integration

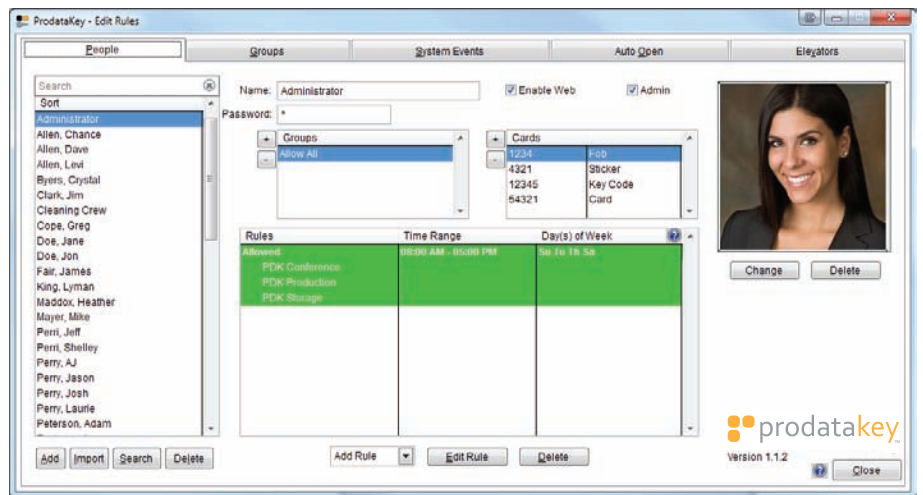

real-time functionality

Each door controller is connected back to the Access Panel or Virtualized Server through real-time Pro wireless, Ethernet, and USB, connections, creating a cohesive hub and spoke. This allows immediate changes to take place throughout and no need for a dedicated PC.

easiest to use software *Guaranteed!*

Access control software should not only be functional but easy to use!

Without limiting functionality ProdataKey has developed its one of a kind **smart** access™ software with more flexibility and less headaches than any other access software on the market. All while maintaining its unique real-time functionality.

smart access mobile™

The **smart** access mobile™ app by ProdataKey gives you real time access from the palm of your hand! Simply select your door to display options for Open, Hold Open, 5 Min Hold, Lock Down, and more.

When connected, each door will display an IP camera live through the **smart** access mobile™ app. Allowing you to verify the individual prior to granting access.
